

**IMPORTANT INFORMATION ABOUT YOUR DRINKING WATER**  
**Monitoring Requirements Not Met for Chemical Monitoring**

Our water system violated several drinking water standards prior to the end of 2008 and 2009. Even though these were not emergencies, as our customers, you have a right to know what happened and what we did to correct these situations.

*We are required to monitor your drinking water for specific contaminants on a regular basis. Results of regular monitoring are an indicator of whether or not our drinking water meets health standards. Prior to the end of 2008 and 2009 we did not monitor or test for Nitrate and therefore cannot be sure of the quality of our drinking water during that time.*

What should I do?

There is nothing you need to do at this time.

The table below lists the contaminant(s) we did not properly test for during the last year, how often we are supposed to sample for this contaminant and how many samples we are supposed to take, how many samples we took, when samples should have been taken, and the date on which follow-up samples were (or will be) taken.

Contaminant	Required sampling frequency	# samples taken	When all samples should have been taken	When samples were or will be taken by
Nitrate	Annually	0	2008, 2009	December 31, 2010

What happened? What is being done?

*Monitoring was overlooked. We are re-establishing monitoring & testing in 2011.*
